

## Peer-team Evaluation Form

A few criterions are listed below to help you rate your peer-team's project requirement document. Every criterion is rated from 1-5. 1 is lowest and 5 is the highest.

1. How the idea appeals to you?
2. How well and clear do they present what they want to build?
3. How do you like the features or functional requirements of the project?
4. How well do they give reasons on why they come up with a software architecture like that?
5. How well do they relate their components or classes to the features or functional requirements that they plan ahead?
6. How well do they present the view of the project? (Have they demoed the interface design or have they given graph tools like UML diagrams to show class relationships or object interaction?)
7. How do you rate the complexity of the design process of the project?
8. How do you rate their thoughtfulness about non-functional requirements?
9. How well do they take non-functional requirements into consideration during the design process?
10. How do you rate the feasibility of implementation based on the design in the presentation?
