The pitch

Parth: Have you ever wondered what is the best or cleanest bathroom on campus?

Jerry: Have you ever needed to find a bathroom when you're out late on a Saturday night when you're blackout drunk or intoxicated?

Josh: Have you ever been absolutely lost and had no idea where the closest bathroom is?

Jerry: You can't pee in public because that can make you a sex offender

Marietta: We have a revolutionary product to help you fulfill nature's call. It's called Bathroom Finder.

Parth: Bathroom Finder will help you find restrooms close to you

Jerry: you can filter by gender type, radius, or rating which includes cleanliness

Josh: And it's a web app so it's available on any device with internet access

Outline
- Sales pitch
- Functional requirements
- Software architecture
- Class diagrams (connect features to functions) and sequence diagrams
- Video of UI design
- Non functional requirements (talk about with design)
- Talk about feasibility
  - How we would build the wep app [Josh]
    - html/css, php, mySQL
    - This project is worthwhile because it will help a wide range of people whether they be tourists, new students, or people with tiny bladders

The Presentation

1 - 3: The pitch from above [everyone]

5 - 9: Functional requirements [Josh]

10 - 12: Software architecture [Parth]

13 - 17: Class diagrams [Jerry]

19 - 22: Sequence Diagrams [Marietta]

23 - 28: select, rate, navigate from list and map [Jerry]

29: UI requirement [Marietta]

30 - 32: Non functional requirements [Parth]

33: Feasibility [Parth/Josh]
